ABOUT SALIUS MARKETING

Salius marketing is a brokerage company that promotes multiple offers through Meta Ads (Facebook and Instagram).

The focus is on generating leads and conversions by matching each offer with the right audience, using targeted campaigns, retargeting, and performance optimization to drive consistent results.

CHALLENGES

RESTRUCTURING TARGETING AND FUNNEL ALIGNMENT

- Low lead volume because targeting and campaign structure were not aligned with high-intent audiences, and the funnel lacked strong offer positioning and clear CTAs, reducing conversion rate and limiting consistent lead flow.
- Overlapping audiences and targeting caused duplicated reach, wasted budget, and lower lead quality/conversion rate.
- Limited creative testing on Meta Ads reduced engagement and increased ad fatigue, resulting in weaker lead performance.
- Tracking and attribution gaps across multiple platforms made it difficult to measure true lead sources, quality, and overall campaign effectiveness.

CAMPAIGN DEVELOPMENT

STRUCTURED TESTING AND CONTROLLED SCALING

- Launched multiple campaign types based on the testing goal (cold testing, scaling, and retargeting).
- Implemented 1 ad set per ad structure for clean performance visibility and faster decision-making.
- Built 4 ads per ad set to test variations efficiently within the same audience and budget.
- Tested multiple ad sets using the same videos with different hooks to identify the highest-performing angles quickly.
- Ran a Bid Cap campaign to control cost per lead and stabilize acquisition during testing and scaling.
- Performed daily ad testing and optimization, including pausing underperformers, rotating hooks/creatives, and reallocating budget to winners.

PERFORMANCE OPTIMIZATION

MONITORED PERFORMANCE, SCALED WINNERS, TRACKED LEADS.

Campaign performance was monitored through RedTrack to keep attribution and lead quality reporting consistent. A dedicated scaling campaign was also launched to separate winning creatives from testing efforts and push budget into the best performers without disrupting learning. Clear KPIs were set for all testing ads to make daily decisions faster and more accurate, and testing was run using a 1-day click attribution setting to evaluate performance based on recent, high-intent actions.

RESULTS

LEAD PER MONTH \$1000+

Primary Goal: Increase lead volume through Meta lead campaigns.

Secondary Goal: Reduce Cost Per Lead (CPL) while maintaining lead quality.
